TROUBLESHOOTING The most common technical problems are a result of outdated audio and video drivers. Computer, video card and sound card manufacturers typically make driver updates available for their products online for free download. If you are not able to obtain updated drivers directly from the manufacturer, try searching sites that specialize in maintaining driver libraries like www.download.com and www.windrivers.com.

PHOTOSENSITIVITY WARNING. A very small percentage of people may experience an epileptic seizure when exposed to certain light patterns or flashing lights that may appear in video games. Even people who have no history of epilepsy may have an undiagnosed condition that can cause these "photosensitive epileptic seizures" while watching or playing video games.

If you, or anyone in your family, have an epileptic condition, consult your physician prior to playing. If you experience any of the following symptoms while playing a video or computer game -- altered vision, eye or muscle twitches, loss of awareness, disorientation, dizziness, any involuntary movement, or convulsions -- IMMEDIATELY discontinue use and consult your physician before resuming play. Parents should watch for or ask their children about the above symptoms as children and teenagers are more likely than adults to experience these seizures.
